

Coupon , marketing campaigning

From where we generate the coupon , a fixed coupons will be there when new famer logged the account , so they can use that coupon anytime they can use

And then other coupons then will make by hod it can be of then region wise it will go to the famer region wise , product wise it can go the farmers will validity and all like that

They can see active marketing campaigning , how much farmers got the coupon , how much famer availed , how much remain , how much availed from which state , region , territory , village , from which dealer availed the maximum like this , all data proper kpi , cards , graphs will be there to see this.

It should show on which products the coupon used the most , like all this things

Total credit generated

Total we spend on marketing

Show important things like that you have this much farmers so you are creating this coupon offer so max this amount you will be spend , also this warning , so make tabs like this

Make tab like to manage coupon to disable it , active it , stop for now

All coupon codes will be 7 strings all could be totally different , all from different for all each other , so no one can guess the coupon and all
